

U.S. Patent Application of Huang et al.

What is claimed is:

Sub.
a/

1. A method for suppressing undesired viral growth in a host which comprises administering to the host an effective amount of 1,4-bis-(3,4-dihydroxyphenyl)-2,3-dimethylbutane or pharmaceutically acceptable derivative thereof.

2. The method of claim 1 wherein the compound administered is a compound of the formula:

wherein R_1 , R_2 , R_3 and R_4 are independently $HO-$, CH_3O- , $CH_3(C=O)O-$ or functional equivalent thereof.

3. The method of claim 2 wherein the functional equivalent is water-soluble.

4. The method of claim 1 for suppressing Herpes simplex virus in the host.
